November 2005

generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases. Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions Searches run against Amino Acid Published Applications produce two sets of results, with the extensions rapbm (Published Applications AA Main) and .rapbn (Published Applications AA New). .rnpbm (Published_Applications_NA_Main) and .rnpbn (Published_Applications_NA_New).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                               1 MAFQQSSPLVKFEASPAESF.....QPQSGASSHGCDDGGIAVGV 451

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 4,

Publication No. US20010034045A1

GENERAL INFORMATION:

APPLICANT: Pentilla, Merja E.

APPLICANT: Ward, Michael

APPLICANT: Wang, Huaming

APPLICANT: Wang, Huaming

APPLICANT: Valkonen, Marku

TITLE OF INVENTION: Increased Production of Secreted

TITLE OF INVENTION: Proteins by Recombinant Eukaryotic Cells

FILE REFERENCE: GC590-2

CURRENT APPLICATION NUMBER: US/09/816,277

CURRENT FILING DATE: 2001-03-23

PRIOR PRIOR PAPEL CATION NUMBER: US 09/534,692

PRIOR FILING DATE: 2000-03-24

NUMBER OF SEQ ID NOS: 63
